

PRODISPLAY®

360 DUAL IMAGE PROJECTION FILM

360° Dual Image Projection Film combines the characteristics of a rear projection diffusion film with a front projection reflective film to produce an image viewable on both sides at the same time.

This unique screen technology performs well even in high ambient light, can be used for either front or rear projection, making it ideal for those difficult installs. Just a single projector is needed, with excellent viewing angles on either side. 360° Projection Film is available in a range of standard screen sizes (32"-132"), in wholesale roll format (10 and 30 metre rolls) or by the linear metre off the roll (1,650mm/65" wide).

Custom shapes and sizes are also available and multiple pieces can be joined to create large format displays. The film has a self-adhesive layer for easy application to glass or plexiglas, and a non-adhesive version is also available.

SPECIFICATIONS

- Designed for front or rear projection
- Dual image (mirror image on one side)
- Off-white film with self-adhesive layer
- 120 Micron thickness
- Standard screen sizes from 32"-132"

BENEFITS

- Two images using only one projector
- Supports wide viewing angles
- Supports 4K or HD rear projection
- Custom sizes & shapes available
- Rigid acrylic screen options available

APPLICATIONS

- Museums & visitor attractions
- Live events & product launches
- Car showrooms
- Retail stores & shopping centres
- POS/POP displays
