

**PRODISPLAY®**

**CLEARVIEW REAR PROJECTION FILM**

Wow your client with a Clearview holographic effect projection film from Pro Display, a highly transparent film for a 2D peppers ghost effect. Manufactured as a self-adhesive film or acrylic screen, Clearview's holographic effect is a popular choice for museums, live events and product launches, to name just a few examples.

Transparent projection screens are guaranteed to catch attention with their contemporary design, and by creating an image that appears to float in mid-air, just like in the hit movie Minority Report!

Pro Display's Clearview holographic effect projection screen offers a low cost alternative to competing holographic screens, with superior performance, definition and no critical angle of projection. This amazing technology still allows visibility through the screen displaying bright, sharp and vibrant images even in brightly lit environments.

## SPECIFICATIONS

- Transparent with self-adhesive layer
- UV stable & no shrinkage
- Transmission - 86%
- Viewing Angle - 120°
