

PRODISPLAY®

DIGITAL GLASS TOUCH SCREEN

Interactive Digital Glass is Pro Display's next generation ultra-short throw projection screen technology, combined with our intouch infrared multi-touch frames. Recent manufacturing advances have allowed us to produce our Interactive Digital Glass screens in standard sizes up to 185" diagonal, with custom sizes up to 8m x 3m available on request.

Our special process coats an advanced optical projection layer directly down onto toughened glass, creating an extremely robust solution for interactive digital signage and large format edge blending. We then add our intouch infrared multi touch frames to deliver smooth, responsive 6, 12 or 32-point multi-touch interaction. Digital Glass is designed specifically for ultra short throw projection, also supporting standard and short-throw, with high brightness, unsurpassed contrast, and even light distribution with no hot spots.

We have tested it thoroughly with a range of ultra-short throw projectors: sub-£1k budget UST models, mid-range UST projectors, and high-end standard throw projectors fitted with Panasonic's DLE-030 short throw lens.

SPECIFICATIONS

- Designed for ultra-short throw projection
- Options for 6,12 and 32-point multi touch
- Peak gain - 0.65
- Viewing angle - 160°
- Standard screen sizes - 65" - 185"

BENEFITS

- Glass and acrylic options available
- Custom acrylic sizes up to 8m x 3m
- Multi-touch interactive capabilities
- Produces HD/4K images
- Supports edge blending applications

APPLICATIONS

- Museums & attractions
- TV studios & broadcasting
- Leisure facilities & music venues
- Exhibitions & trade shows
- Auditoriums & meeting rooms
