

**PRODISPLAY®**

**INTERACTIVE TRANSPARENT LCD**

Pro Display's Interactive Transparent LCD Displays offer a HD/4K see through display designed for integration into housing. These Transparent Touch Screens combine our Transparent LCD Screens, favoured by Adidas and Nike, with our Infrared Touch overlays with 6 or 10 point multi-touch interactivity.

With HD and 4K solutions, our Transparent LCD Touch Screens offer vivid colours in standard sizes up to a huge 98", with options for smaller screen sizes available. These interactive transparent panels are manufactured ready for integration into housing, needing a significant backlight to produce the image on screen. In projects like Nike's House of Innovation, these screens were installed without housing & used an oversized backlight for optimum image quality.

We also offer Interactive Transparent LCD Showcases that come complete with housing & Interactive Transparent OLED Displays.

## SPECIFICATIONS

- Standard screen sizes from 23"-98"
- 6 and 10 point multi-touch options
