

PRODISPLAY®

55" INTERACTIVE TRANSPARENT OLED

Pro Display's 55" Interactive Transparent OLED Displays offer a HD see through display ideal for window display and POS applications. These Transparent Touch Screens combine our innovative Transparent OLED Screen with PCAP touch technology, offering an engaging display with 10 touch points.

This 55" transparent touch screen offers full HD resolution with vivid colours, remaining transparent even when turned off making it perfect for window display applications. Our Transparent OLED's require no backlight or housing unlike competing Transparent LCD technology, allowing the potential to layer multiple OLED's to create dynamic displays or join them side by side to create large interactive transparent video walls.

We can manufacture stands and bespoke housings for our Transparent OLED Screens, custom designed to suit your requirements.
