

PRODISPLAY®

PCAP TOUCH OVERLAY

Pro Display manufactures a range of Interactive PCAP Glass Overlays to transform any existing LCD / LED screen into a touch screen. The Interactive Glass Overlay can be simply fitted to any existing screen using a velcro (temporary) or VHB (permanent) fix.

The overlay connects to any Windows system via USB offering single, dual or multi-touch functionality through projected capacitive touch. Each Interactive Glass Overlay is manufactured using toughened glass making them a much more robust solution in comparison to other touch screen technologies, ideal for high traffic environments like shopping centres and museums.

Standard screen sizes are available from 15" to 98" with custom sizes available on request and smaller sizes available based on quantity. We can also offer solutions where the glass overlay is oversized as well as Mirrored interactive overlays, ideal for retail and retrofit magic mirror applications.

SPECIFICATIONS

- Projective Capacitive touch technology
- Single, Dual and Multi-touch options
- USB HID plug and play
- Designed for use with LCD/LED screens
- Standard screen sizes - 15"-98"

BENEFITS
