

PRODISPLAY®

BESPOKE INFRARED TOUCH OVERLAY

Our Interactive Touch Frames are designed for areas with heavy footfall providing access to information, entertainment and commerce applications. The frames connect to any PC or Laptop, instantly creating multi-touch interaction with browsers, PDF documents, Office applications and more.

Our unique Interactive Touch Frames offer a true multi-touch experience transforming any screen or surface into an interactive display. Whether it's an existing screen, video wall or table, Interactive Frames offer the perfect choice. Our IR Touch Overlays are compatible with LCD, LED or Projection displays and come as a retro-fit kit which can be installed in minutes. Simply connect the USB and power cable and the Interactive Touch Frame is recognised as a regular input device (just like a mouse).

You have a choice of 6, 12 or 32 point infrared multi touch – delivering a smooth and rapid touch experience. Interactive Touch Frames are available in standard diagonal screen sizes or custom sizes to suit your specific needs.
