

**PRODISPLAY®**

**CLEARVISION FRONT PROJECTION FILM**

Wow your clients with Clearvision Optical Front Projection Film from Pro Display. Clearvision's holographic effect is a popular choice for museums, live events and product launches to name just a few examples.

Clearvision is manufactured as a self-adhesive film making installation to glass or acrylic simple while the film supports ultra-short throw projection displaying an image on both sides at the same time. Transparent projection screens are guaranteed to catch attention with their contemporary design, and by creating an image that appears to float in mid-air, just like in the hit movie Minority Report!

Clearvision is also available in a range of standard screen sizes from 32"-120" or in 10m x 1.524m rolls while Clearvision glass screens are also available on request.
